ance Notes on Codes and Abbreviations" appearing at the begin-  
ning of each regular issue of the PCT Gazette.

(54) Title: NON-HUMAN MAMMAL COMPRISING A MODIFIED SERCA2 GENE AND METHODS, CELLS, GENES, AND  
VECTORS THEREOF

(57) Abstract: The present invention relates to a non-human vertebrate, more particularly a non-human mammal, in which all cells  
contain genetic modifications in a Ca<sup>2+</sup>-handling Serca ATPase gene, more particularly the Serca2 ATPase. Defective Ca<sup>2+</sup> handling  
is induced in live animals by introducing genetic elements which direct the timing and specificity of the gene inactivation to the organ  
or tissue of interest; e.g. cardiac muscle cells. The primary application is to provide a standardized and reproducible animal model  
for heart failure or other human diseases, in which the defective Ca<sup>2+</sup> handling function by the Serca gene can be manipulated in live  
animals. This is the only existing animal to date with such genetic modifications for this class of Ca<sup>2+</sup>-handling proteins.
